Object		Description
dates		the stay dates of the reservation
	from	the desired start date (check-in date) of the reservation
	to	the desired end date (check-out date) of the reservation
propertyId		the property ID this reservation is targeting
leadGuest		details of the lead guest. see the Guests section below for details
reference	agency	a reference that will be recorded on the reservation, usually used for matching your booking reference to the hotel booking

Object		Description
		reference received in the response. you can pass an empty string if not used.
paymentDetails	how will this reservation be paid, see the Payment Details section below	
rooms	a collection of room objects	see the Rooms section below for details
meta	a key/value array of objects to be saved on the reservation	in case the <code>meta</code> object was sent during search , it is mandatory to send the same values under this object
isTest	a boolean value to mark whether the booking is a test booking or a real one	
groupBooking	a boolean value to state if the booking should be treated as a group booking rather than a FIT booking	

i NOTE

If you include the `meta` object during search, you MUST include the same keys and values on your booking request under the `meta` object. failing to do so might cause discrepancies between the searched conditions and the booked conditions.

Payment Details

Object		Description
type	the payment method type. available values are <code>credit_card</code> , <code>credit_balance</code> , <code>bank_transfer</code> , <code>external</code> , <code>enett</code> , <code>paypal</code> , and <code>stripe</code> . The expected default is <code>credit_card</code> unless otherwise configured. consult with your account manager in case of doubt.	
details		an object that describes the details for the selected type. below you will see the <code>credit_card</code> details object, for all other objects please contact your account manager
	number	the number of the credit card
	cvv	3 or 4 digit code found on the back of the physical credit card
	expiry	expiration month and year of the credit card
	name	first and last names of the credit card holder
	charge	boolean (<code>true</code> / <code>false</code>), indicates whether <code>HyperGuest</code> should charge the credit card or simply pass it forward to the property. This attribute should always be set to <code>false</code> unless instructed otherwise by the <code>HyperGuest</code> account management team.

 WARNING

DO NOT set the `charge` attribute to `true` unless you have a pre-arranged agreement with HyperGuest

Rooms

Object		Description
roomCode		the code of the room you're looking to book, as received from the property ARI source. see the note below
roomId		the internal <code>HyperGuest</code> ID of the room you're looking to book. see the note below
rateCode		the rate plan code you're looking to book on a specific room, as received from the property ARI source. see the note below
expectedPrice		The price the property is expecting to get from the payer (either from the customer or from the agent)
	amount	the price amount of the expected price
	currency	the currency related to the expected price
guests		the guests that will be staying in that specific room, see the Guests section below for details.
specialRequests		array of strings with free-text description of your special requests.

 NOTE

If you send the `roomId` and the `roomCode` attribute together, the system will ignore the `roomCode` attribute and only take the `roomId` one.

Guests

NOTE

The `contact` object is mandatory only on the `leadGuest` object on the reservation, it is optional for individual room guests

Object		Description
birthDate		the birth date of the lead guest. if you are not collecting exact dates, an age will suffice. If you are also not collected ages, you can send a generic adult (30+) year of birth with a generic month and day. expected format: <code>YYYY-MM-DD</code>
contact		contact information for the guest the property can reach out to
	address	home address of the lead guest. If you are not collecting the address you can send <code>N/A</code>
	city	the home city of the lead guest. If you are not collecting the address you can send <code>N/A</code>
	country	country of the lead guest in <code>ISO 3166-1</code> format. This is a required attribute that may affect the price, make sure you send the correct information to avoid issues with the reservation
	email	email of the lead guest, this is used to contact the guest in case of changes. If you do not want to share the customer email for any reason, you can pass your company email.
	phone	contact phone of the lead guest, this is used to contact the guest in case of changes. If you do not want to share the customer phone for any reason, you can pass your company 24 hour support phone.
	state	state of the lead guest, you can pass <code>N/A</code> if not applicable.

Object		Description
	zip	zip code of the lead guest, you can pass <code>N/A</code> if not applicable.
	name	the first and last name of the guest. This is important to pass correctly, as some properties may refuse to accept reservations for the wrong names
	title	the lead guest title, supported titles: MR,MS,MRS,C.

WARNING

The `isTest` attribute only marks the booking as a test booking on HyperGuest. If you are performing a test on a live hotel, you will be charged for this booking.
